

Part 1

Learning Objectives

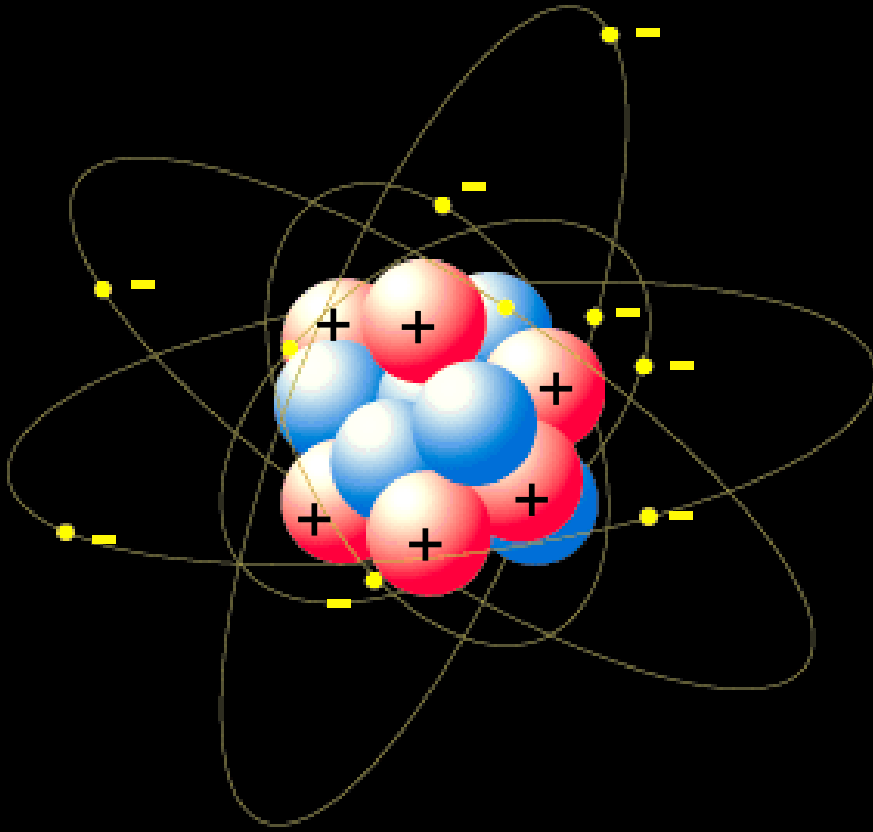

- Identify the basic parts of an atom.
- Describe the charge and location of protons, electrons and neutrons.

What are Atoms?

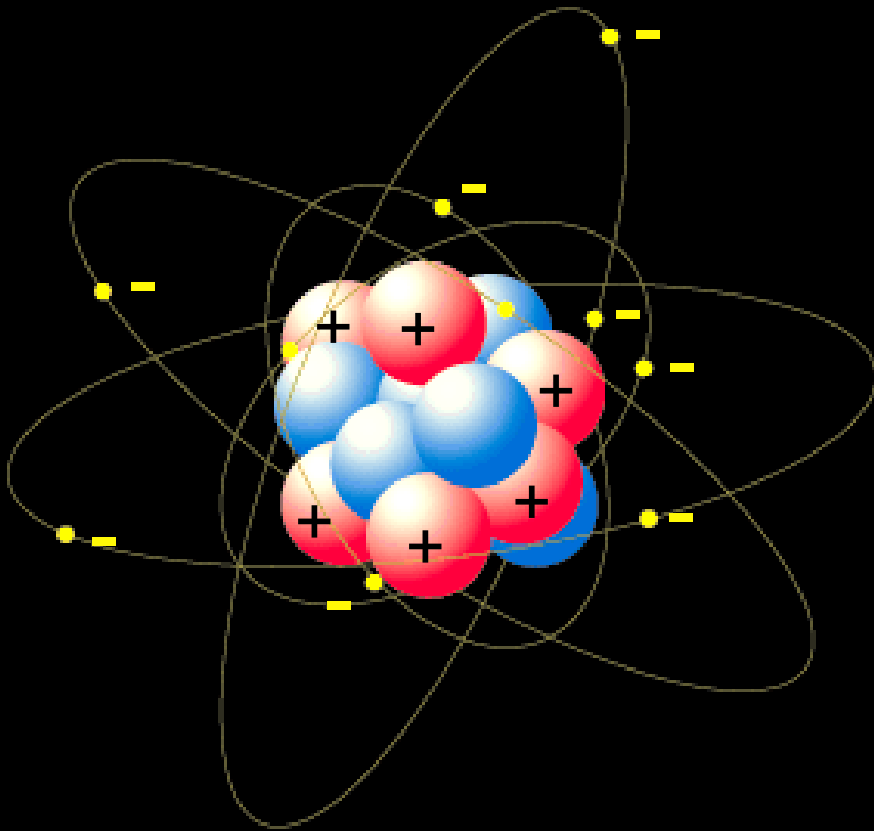

Atom – the smallest particle of matter.
They make up everything around us.

Parts of an Atom

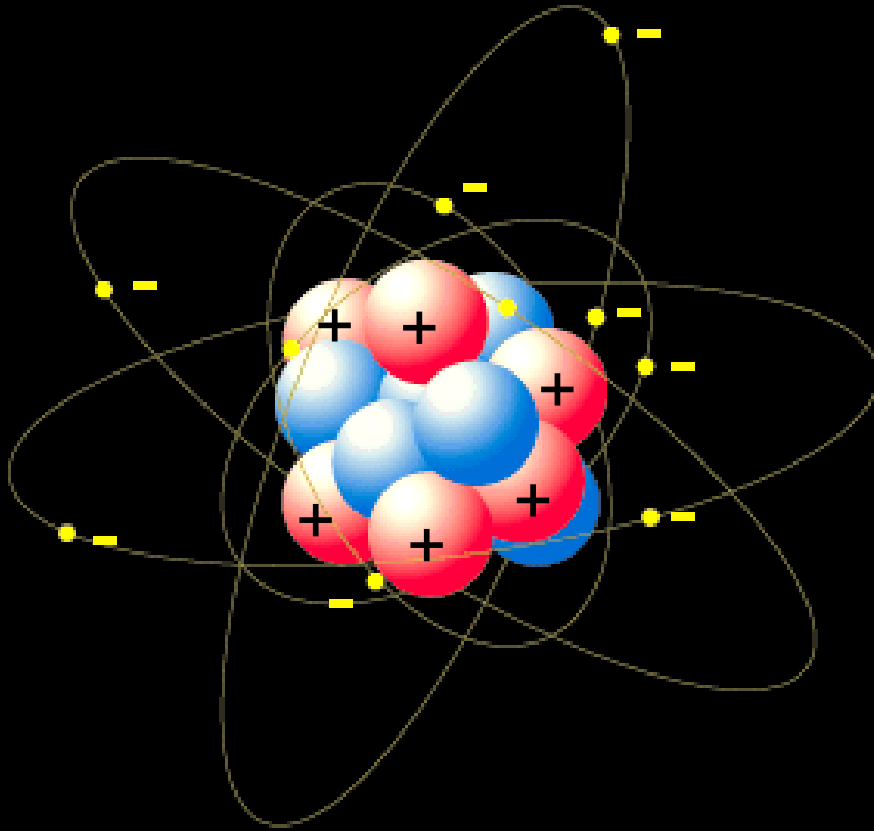

- Proton
- Neutron
- Electron

Parts of an Atom - Proton

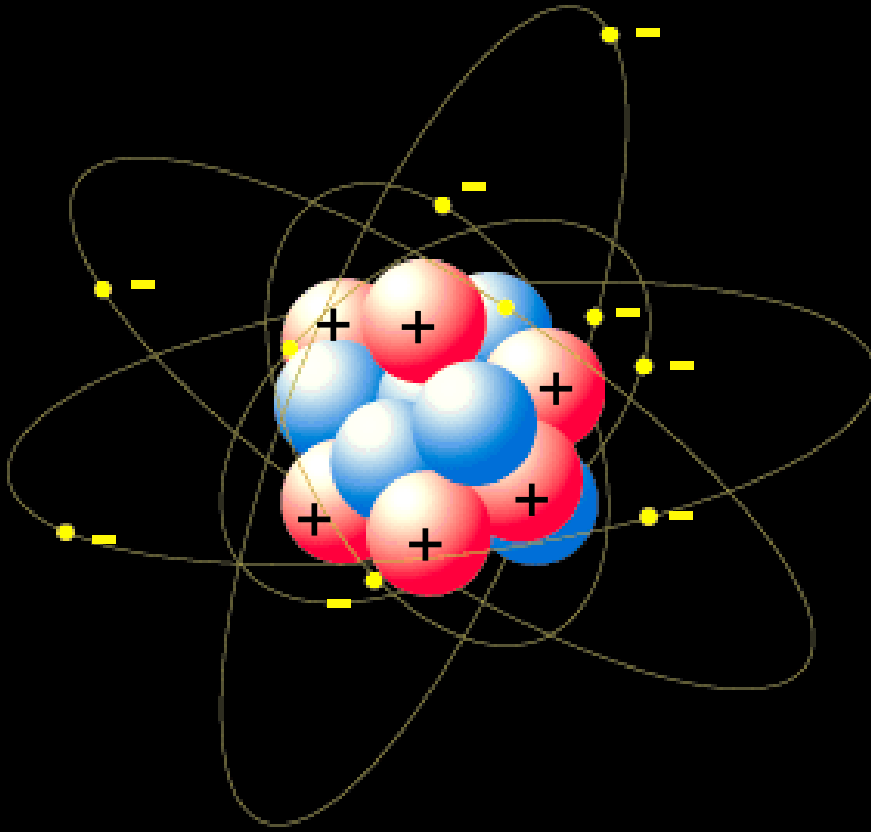

Proton – positively (+) charged atomic particles. Located in the nucleus of the atom.

Parts of an Atom - Neutron

Neutron –
uncharged (neutral)
atomic particles.
Located in the
nucleus of the atom.

Parts of an Atom - Electron

Electron – negatively (-) charged atomic particles. Located orbiting around the nucleus.

Charge and Location

PARTICLE	CHARGE	LOCATION
PROTON	+	Nucleus
NEUTRON	NONE	Nucleus
ELECTRON	-	Outside Nucleus (in motion)

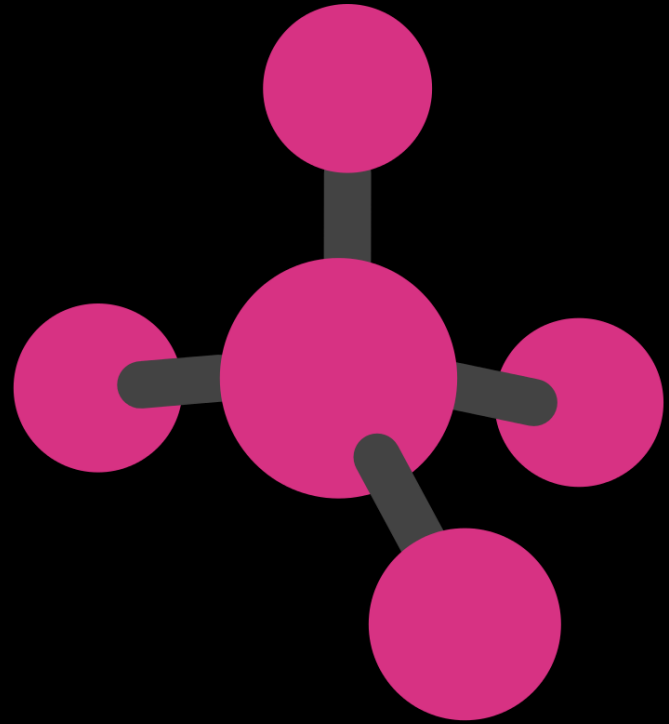

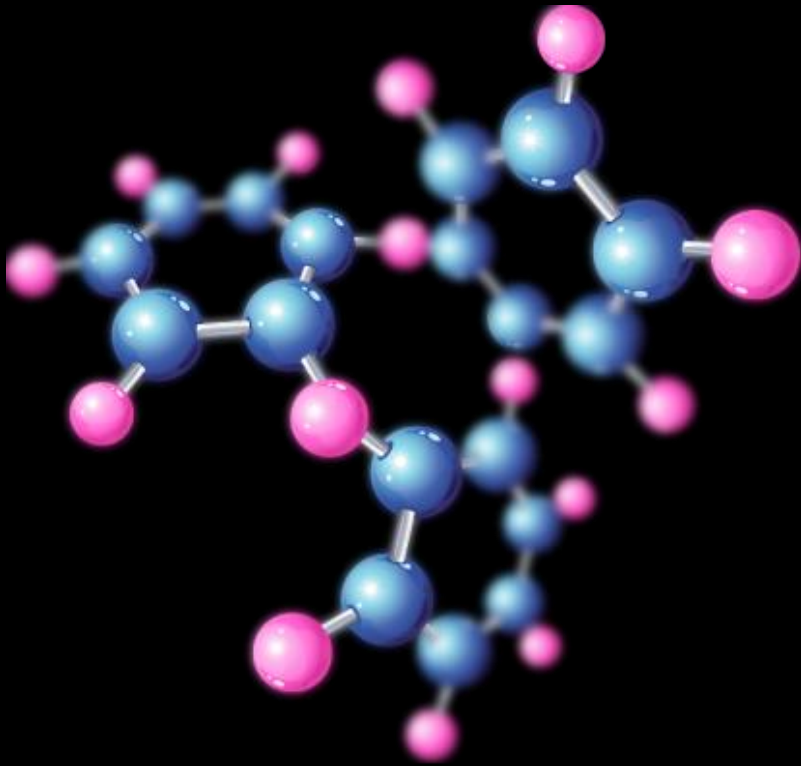

ELEMENTS

Periodic Table of the Elements

1 11A 11A																	18 VIII A 8A

Elements are only one type of atom

MOLECULES

Molecules two or more atoms held together by chemical bonds.

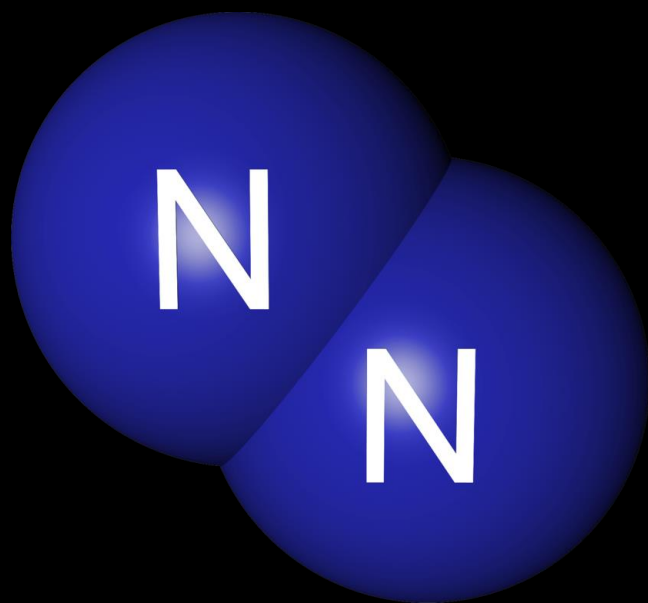

COMPOUNDS

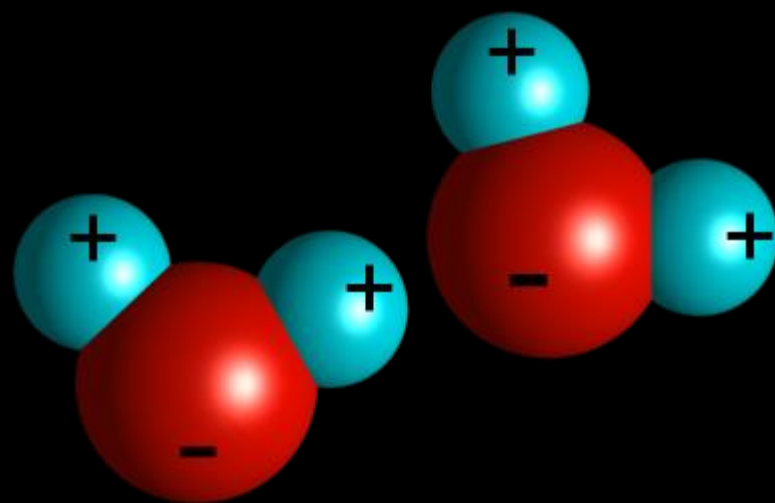

Compounds are made up of different types of atoms.

Molecules vs. Compounds

All compounds are molecules. Not all molecules are compounds.

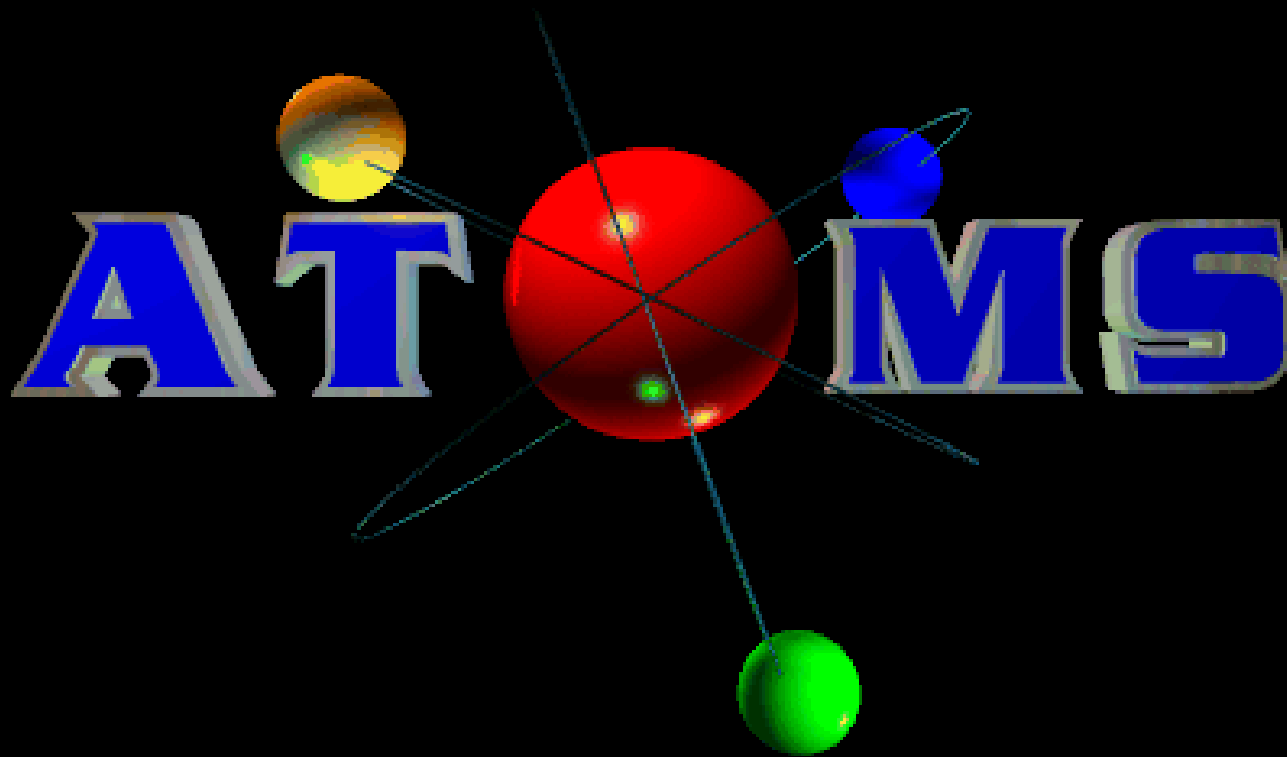

Molecule
Not compound

Part 2

Atomic Number

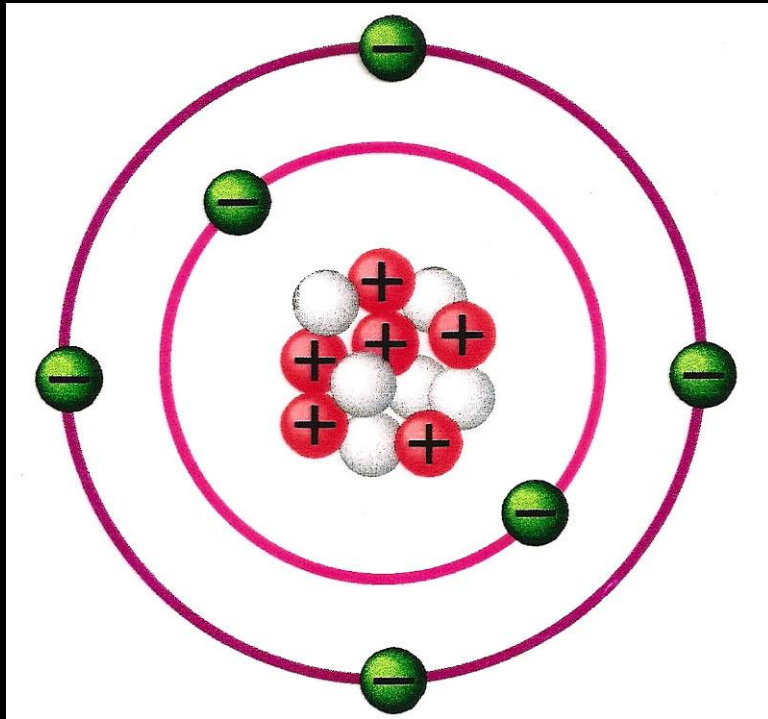

How many
protons (red) are
in this nucleus?

6

Atomic number = # of protons in the nucleus
of an atom. It identifies the element.

Atomic Mass

What is the
atomic mass of
this atom?

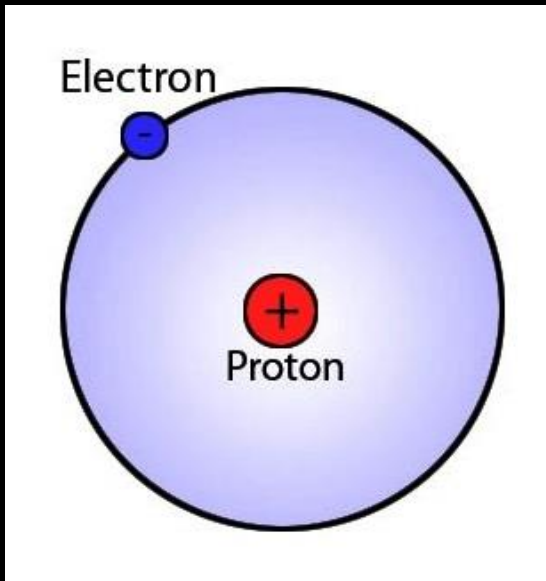

12

Atomic mass = # of protons + neutrons.

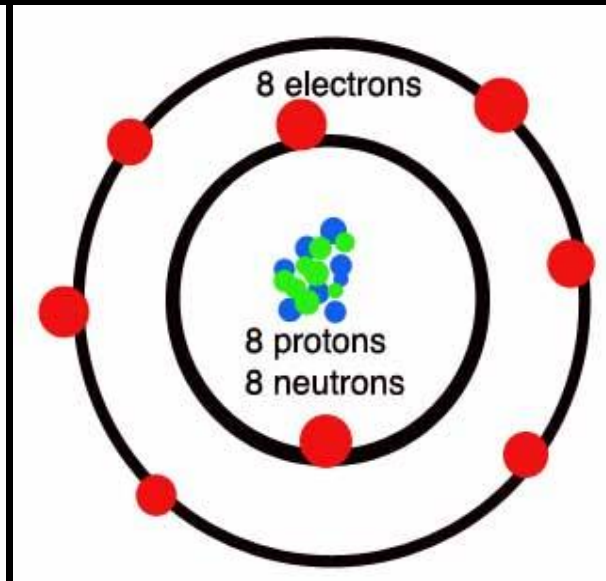

Models of C, H, and O Atoms

C, H and O are found in all living things.

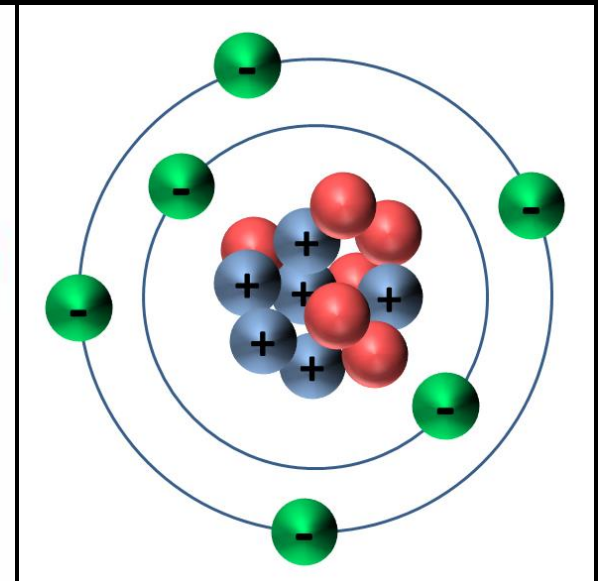

Hydrogen Atom

Oxygen Atom

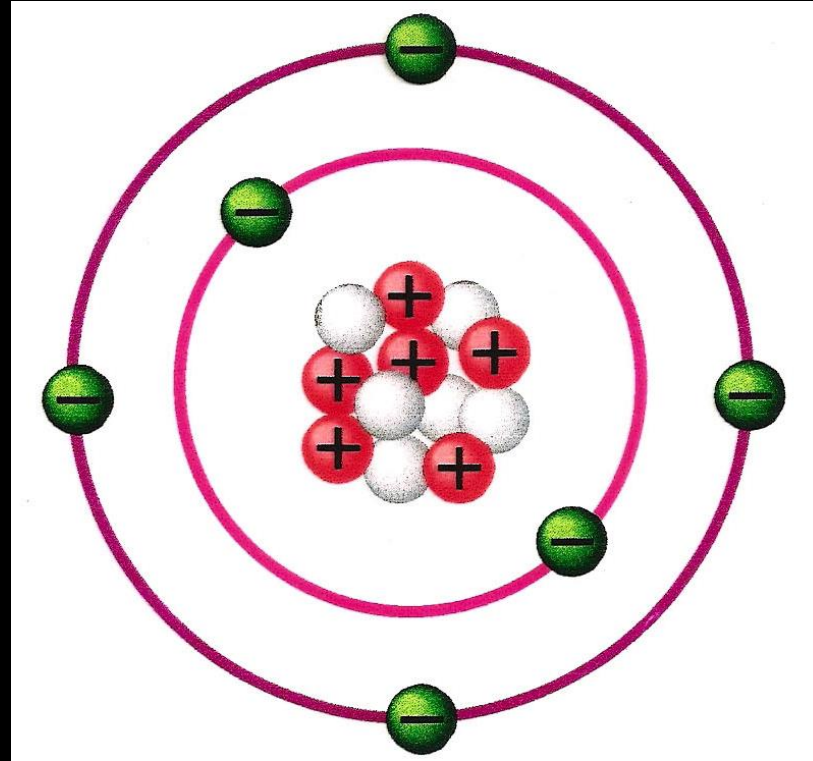

Carbon Atom

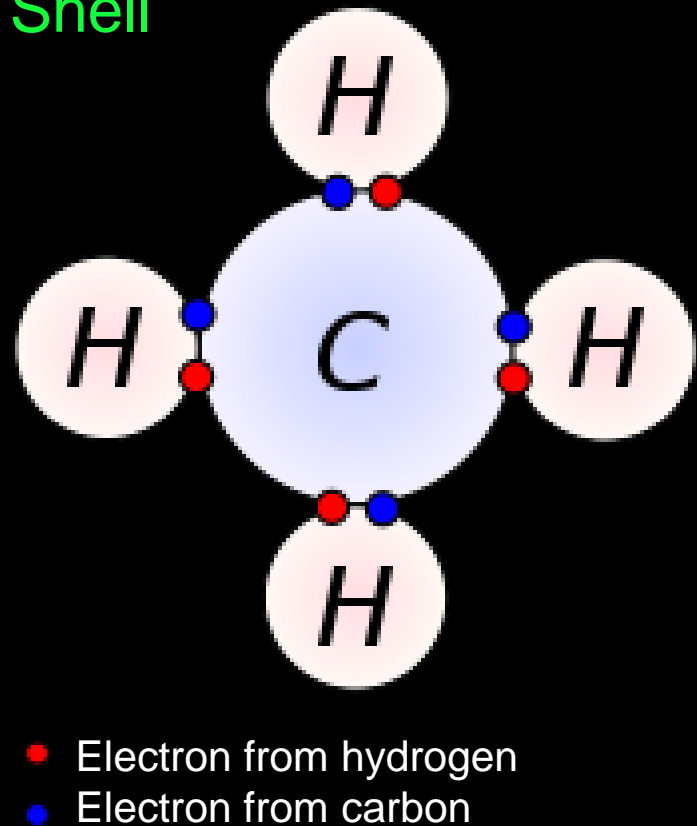

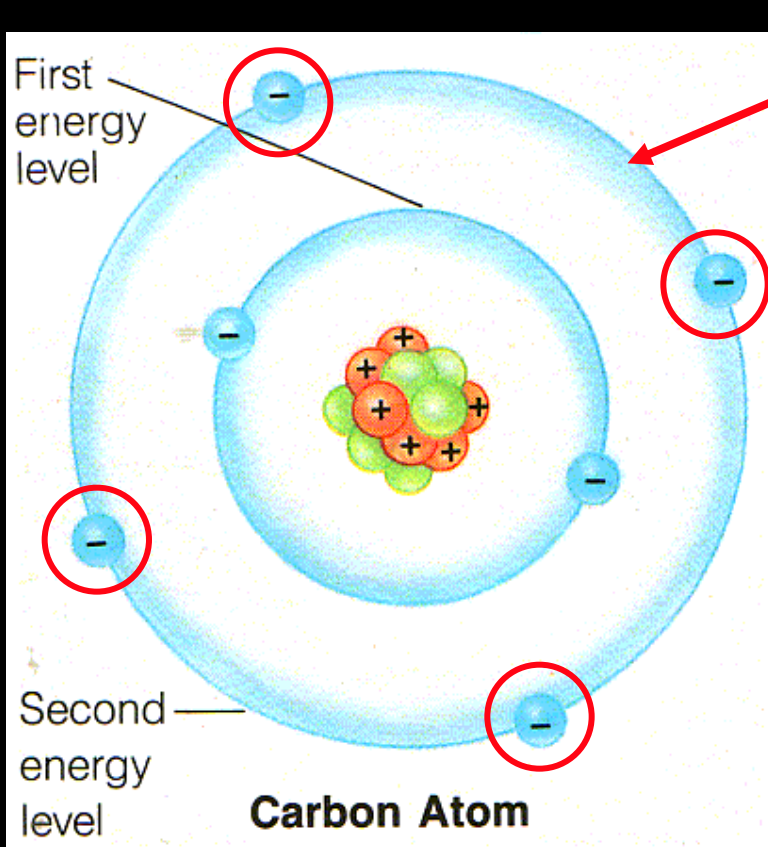

of electrons = # of protons

Electron Shells

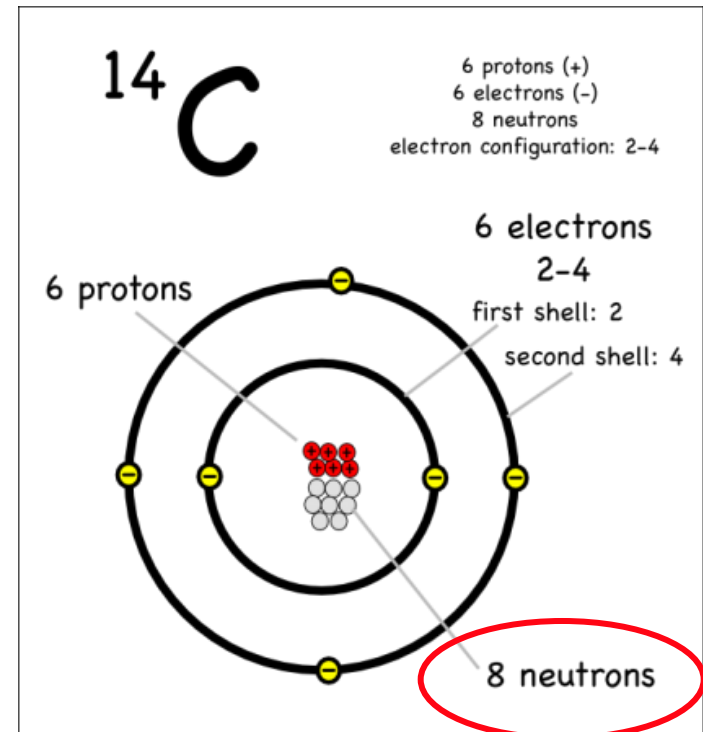

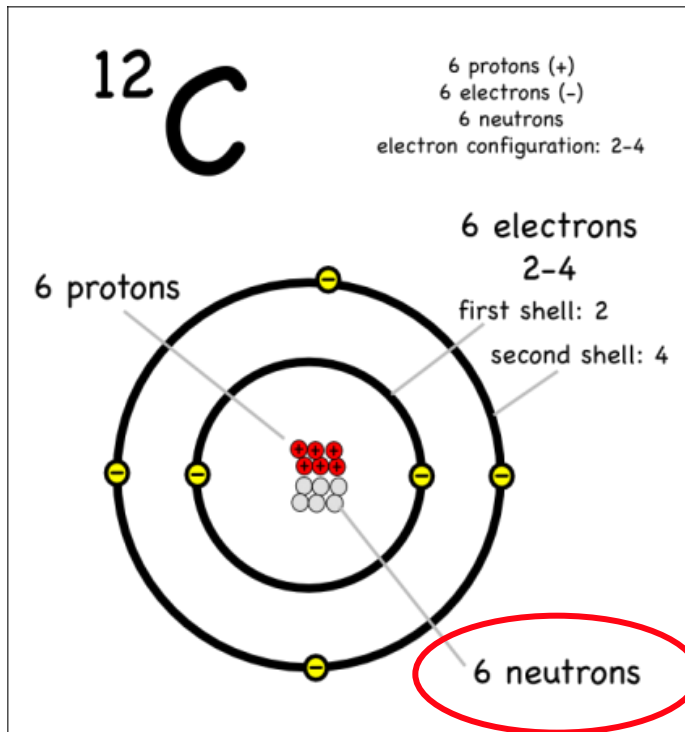

Electrons are arranged in energy levels or shells around the nucleus.

Valence Electron

Valence Electron - an electron that can participate in the formation of a **chemical bond**.

Isotopes

Isotope - atoms of the same element that differ in their number of neutrons.
