

# Observation vs Inference

# Learning Objectives

- Explain the difference between an observation and an inference.
- Describe the two types of observations.

# What is an Observation?

Observation: the gathering of information using one or more of your five senses.

# Two Types of Observations

**Qualitative:** describe  
what you observe

**Quantitative:** measure  
what you observe

The flower has  
white petals

The flower has  
18 petals

# What is an Inference?

This white flower is commonly used to make flower leis in Hawaii

**Inference:** an explanation for the observations that you have made which are based on your past experiences and prior knowledge.

# Example 1

Observation: the grass on the front lawn is wet.

Inference: it rained  
the sprinkler was on  
the dog urinated on the grass!

# Example 2

Observation: the school fire alarm is ringing.

Possible inferences:

there is a fire at the school

this is a fire drill

a student pulled the fire alarm

# Example 3

Provide one observation and inference for the image above.

# Example 4

Provide one observation and inference for the image above.

**The End**
